

THANK YOU FOR YOUR INTEREST IN OUR SERVICES

OVERVIEW

Successful traders depend on the latest, most accurate information for their decision making. Trading methods found in books or articles written years ago offer limited value in today's faster, screen based markets. Each year industry professionals spend millions of dollars upgrading their trading technologies, and hiring the best programmers to develop new models or algorithms to maintain edges over their counterparts. Because Individual traders don't have the financial resources to develop their own software, they mostly rely on outside advisory services or generic charting packages to assist them in trade selection. These methods often fall short of expectations and subscribers in the end lose money or just give up. A 90-90-90 saying in the industry states that 90% of individual traders lose 90% of their margin money within their first 90 days of trading!

SHOULD YOU TRADE FUTURES?

Futures markets are the most leveraged markets in the world, and are not suitable for 90% of the investing public. Only those with true risk capital and the ability to exercise self-discipline should proceed further. Others should leave trading futures to the pros. If you are able to risk 100% of the money you bring to the account, and work hard to achieve a 50% success rate on your trades you have an excellent chance of increasing your account size with proper risk management. Just keep realistic goals for capital appreciation and realize that any double digit annual return is considered very satisfactory.

HOW WE CAN HELP YOU

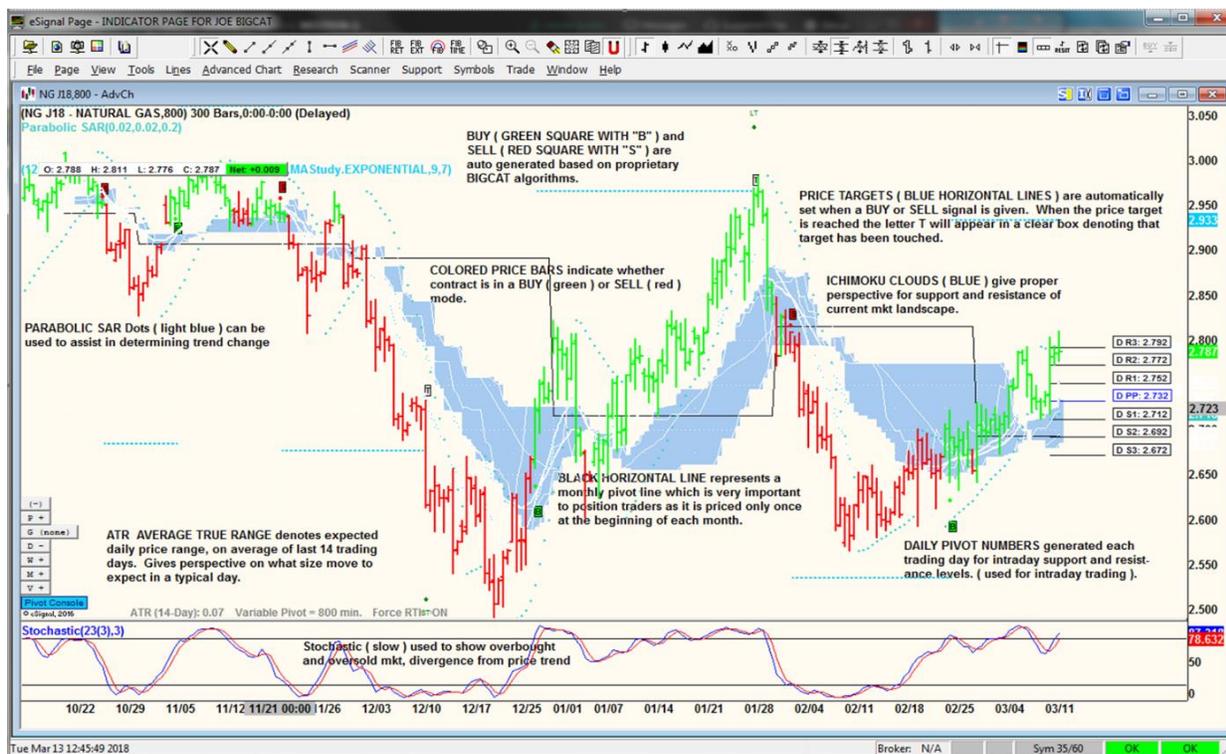

BIGCAT TRADES offers subscribers a high value, low cost method for competing in the toughest markets in the world. By using my proprietary algorithmic computer signals you can confidently enter / exit trades or know quickly if your positions are in sync with your market. Buy and sell signals are updated daily and available 24 hours a day seven days a week. With my staff, we cover most major global markets, and will consider any listed futures exchange upon request. Our computers rely on raw market data to provide signals, thereby eliminating position bias which most traders unfortunately bring with them to their trades. Our goal is to provide you with fewer, better trading opportunities.

In order to see the true market it is imperative to have a perspective that is automatically generated without bias. There are at least 9 ways (besides the simple buy and sell signals) you can use BIGCAT's charts to make your trading decisions, because without the ability to clearly view the market's landscape you will just randomly enter and exit the market too many times for too little money and too much frustration. To become a successful trader you must learn to trade fewer times for bigger price moves.

You must also learn a winning model in which you believe, then practice it over and over in the market. Once you have worked it enough times, you should gain the confidence to tackle any market. I have provided you with the model, all you have to do is learn it and execute it.

Please view a typical BIGCAT chart below with the indicators described. The combination of these tools, all on one page enables you to identify the trend, support and resistance, even the place to be long or short the market. No analyst opinion, just raw data before your eyes. To my knowledge BIGCAT is the only service to offer so many markets with so many indicators on one chart.

REPORT DETAILS

- 1 - BUY (GREEN SQUARE WITH "B") and SELL (RED SQUARE WITH "S") are auto generated based on proprietary BIGCAT algorithms.
- 2 - COLORED PRICE BARS indicate whether contract is in BUY (green) or SELL (red) mode.
- 3 - PRICE TARGET (BLUE HORIZONTAL LINES) are automatically set when a BUY or SELL signal is given. When the price target is reached the letter T will appear in a clear box denoting that target has been touched.
- 4 - DAILY PIVOT NUMBERS generated each trading day for intraday support and resistance levels. (used for intraday trading) .
- 5 - ATR AVERAGE TRUE RANGE denotes expected daily price range, on average of last 14 trading days. Gives perspective on what size move to expect in a typical day.
- 6 - BLACK HORIZONTAL LINE represents a monthly pivot line which is very important to position traders as it is priced only once at the beginning of each month.
- 7 - PARABOLIC SAR Dots (light blue) can be used to assist in determining trend change.
- 8 - ICHIMOKU CLOUDS (BLUE) give proper perspective for support and resistance of current market landscape.

Good luck and good trading!
